## Femap with NX Nastran product repackaging

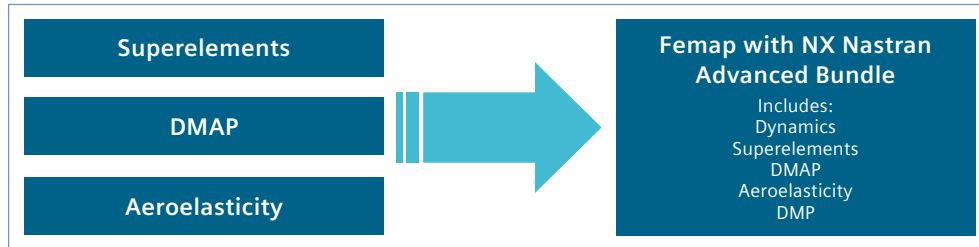

Announcing two major changes to the Femap with NX Nastran, part of the Simcenter™ solutions product configuration:

- A new Advanced module with increased functionality including options previously only available as add-on modules
- A new Desktop Extension module that extends the NX Nastran licensing to match that of an Enterprise installation.

Both new modules are offered at aggressive and competitive price points.

## Femap with NX Nastran Advanced Bundle

The new Femap with NX Nastran Advanced Bundle includes all of the functionality previously available in the Superelements, DMAP and Aeroelasticity modules as well as Dynamic Response. This module also includes a new Distributed Memory Parallel (DMP) capability allowing you to harness the power of multiple processors to accelerate the NX Nastran solution.

### Benefits

- More competitive offering
- Aggressive price point
- Greater functionality
- More value
- Simpler product configuration

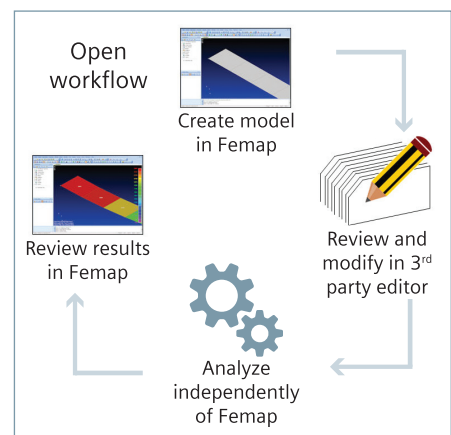

The Superelements, DMAP and Aeroelasticity modules will no longer be available separately.

## Femap with NX Nastran Desktop Extension

With the Femap with NX Nastran Desktop Extension, you can upgrade your NX Nastran license to remove the checksum control. This allows you to manually edit the NX Nastran input files and run the analysis independently of Femap. Opening up the workflow provides a more competitive solution compared to other independent Nastran products, at an aggressive price point.

### Benefits

- A more competitive solution compared to other Nastran offerings
- A more open workflow
- Greater flexibility at an affordable price
